

QINGDAO TONGJIA TEXTILE MACHINERY CO., LTD

HIGH-SPEED CARDING MACHINE
Model: FA206B

Product description: Mainly used to process cotton and chemical fibers of certain length, and then condense them into slivers with certain specifications and store them in a can for the drawing process. This machine is mainly used to process cotton fiber and chemical fiber. After having finished opening, carding, cleaning and mixing cotton (chemical fiber) layers conveyed from the chute feeder, or cotton (chemical fiber) laps of certain evenness from blow room, at the same time removing some short hairs and trashes, then it can condense them into slivers with certain specifications and store them in a can for the drawing process.

Main Feature:

- 1) Revolving flat carding
- 2) Advanced control system monitors.
- 3) The working status and running efficiency.
- 4) Safety protections and self-diagnosis system.
- 5) Sophisticated suction system provide better opening and cleaning.
- 6) Independent transmission motors adjusted by inverters for high efficiency.
- 7) User friendly graphical interface
- 8) Easy access to control Parameters.
- 9) Smart mechanical design makes maintenance an easy task.
